

CAPABILITY SHEET

Databricks

Volitiion is an approved Databricks partner. What we bring to a lakehouse engagement is not generic data consulting — it is nine years inside the federal HR and financial systems that generate the data, and the 8(a) vehicle to get started quickly.

SBA 8(a) through July 2030

ISO 9001 · 20000-1 · 27001

Oracle Service Partner

Workday Service & AMS Partner

Databricks Partner

CMMC Level 2 in progress

WHAT WE DO ON THE LAKEHOUSE

Ingestion from systems of record — Pipelines from PeopleSoft HCM and Financials, Workday, Oracle Cloud and ServiceNow, built by people who know those schemas.

Data engineering — Medallion architecture, incremental and streaming ingestion, transformation and reconciliation against the source ledger.

Governance — Unity Catalog design, lineage, access control and PII handling aligned to federal privacy requirements.

Analytics and ML enablement — Curated datasets and feature preparation that make reporting and machine learning viable on trustworthy data.

ENGAGEMENT MODEL

Co-sell with Databricks — Joint positioning into federal, state and local accounts where Volitiion holds the ERP relationship.

8(a) acquisition path — Sole-source eligibility through July 2030 shortens the route from requirement to award.

Prime or subcontract — We hold state and public-authority prime vehicles and deliver as a subcontractor to established federal primes.

Quality system — ISO 9001, ISO/IEC 20000-1 and ISO/IEC 27001 certified, with CMMC Level 2 in progress.

SELECTED CLIENTS

Navy Federal Credit Union

Multiple engagements · cloud, security and data engineering

U.S. Department of Transportation

Cloud migration

U.S. Department of Health & Human Services

Multiple engagements · HR systems modernization

DIFFERENTIATORS

We know where the data comes from.

Payroll, personnel action, position, time and labor, grants and general ledger data arrive with structure and history we have worked with directly.

Reconciliation is the hard part.

Our teams have closed HR and financial data to actuals under contract — the discipline a lakehouse needs to be trusted.

Regulatory data programs.

Data ingestion frameworks built for a regulatory data management program at a major financial institution.

Cloud-native footing.

Oracle Cloud Infrastructure and government cloud engineering, including analytics workload migration for a federal agency.

Why ERP incumbency matters.

The partnership is newly approved; the practice builds on transferable delivery across the systems that generate federal HR and financial data.
